How to find dependencies using SQL Server Management Studio

Use View Dependencies option in SQL Server Management studio to find the object dependencies

For example : To find the dependencies on the **Employees** table, right click on it and select **View Dependencies** from the context menu

Identifying Object Dependencies

In the **Object Dependencies window**, depending on the radio button you select, you can find the objects that depend on Employees table and the objects on which Employees table depends on

Identifying object dependencies is important especially when you intend to modify or delete an object upon which other objects depend. Otherwise you may risk breaking the functionality
