Part 144 - exec vs sp_executesql in sql server
Part 145 - Dynamic sql table name variable

Quotename function in SQL Server

QUOTENAME() function

➢ Takes two parameters - the first is a string, and the second is a delimiter that you want SQL server to use to wrap the string in

➢ The delimiter can be a left or right bracket ([]), a single quotation mark ('), or a double quotation mark (")

➢ The default for the second parameter is []

```sql
Declare @sql nvarchar(max)
Declare @tableName nvarchar(50)
Set @tableName = 'USA Customers'
Set @sql = 'Select * from ' + QUOTENAME(@tableName)
Execute sp_executesql @sql
```
